## Question

In a survey of 60 people, it was found that 25 people read newspaper H, 26 read newspaper T, 26 read newspaper I, 9 read both H and I, 11 read both H and T, 8 read both T and I, 3 read all three newspapers. Find:

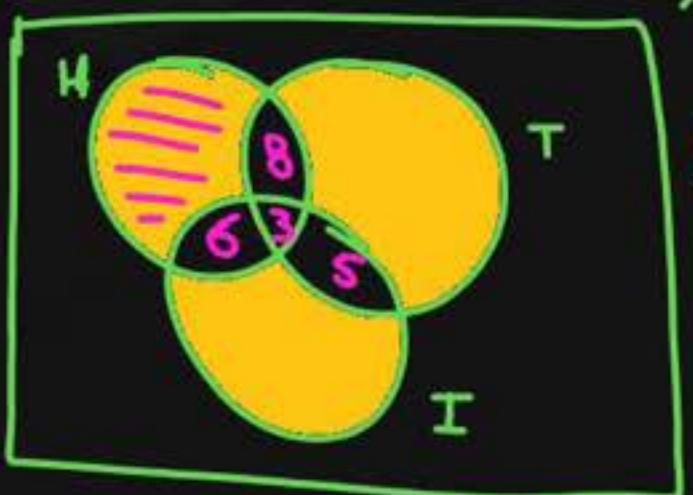

- (i) the number of people who read at least one of the newspapers.

$$n(H \cup T \cup I) = ?$$

- (ii) the number of people who read exactly one newspaper.

$$\begin{aligned} (i) \quad n(H \cup T \cup I) &= (25 + 26 + 26) - (9 + 11 + 8) + 3 \\ &= 77 + 52 - 35 = 52 \end{aligned}$$

In a certain town, 25% of the families own a phone and 15% own a car; 65% families own neither a phone nor a car and 2,000 families own both a car and a phone. Consider the following three statements :

- (A) 5% families own both a car and a phone       $n(P) = 25$
- (B) 35% families own either a car or a phone       $n(C) = 15$
- (C) 40,000 families live in the town

Then,

- A Only (A) and (C) are correct.
- B Only (B) and (C) are correct.
- C All (A), (B) and (C) are correct.
- D Only (A) and (B) are correct.

$$n(P \cup C) = 35$$

$$\underbrace{n(P \cup C)}_{=} = \underbrace{n(P)}_{=} + \underbrace{n(C)}_{=} - \underbrace{n(P \cap C)}_{x}$$

$$35 = 25 + 15 - x.$$

There are two newspapers which are published in a city, namely A and B. It is known that 25% of the city population reads A and 20% reads B while 8% reads both A and B. Further 30% of those who read A but not B, read advertisements and 40% of those who read B but not A also read advertisements, while 50% of those who read both A and B read advertisements. What is the percentage of the population who read the advertisements?

$$n(A) = 25, n(B) = 20$$

$$n(A \cap B) = 8$$

$$n(A \cup B) = 25 + 20 - 8$$

$$\log x + \log y = \log(xy)$$

$$5^7 \cdot 5^3 = 5^{7+3} \\ = 5^{10} \\ =$$

$$80 = 16 \times 5 \\ = 2^4 \times 5$$

$$\log \frac{2^{28}}{2^{27}} = \log 2^{28-27} \\ = \log 2$$

# Types of Trigonometric Equations

## Type-7(b)

Trigonometric equations (having single Variable) which can be solved by the use of boundness of the trigonometric ratios.

**Example:**  $\cos^{50} x - \sin^{50} x = 1$

$$(\cos x)^{50} = 1 + (\sin x)^{50}$$

LHS: [0, 1]

only possibility is
